Non-Metallic Adjustable Wall Box for Both New & Old Work Construction

Un-like Other Adjustable Boxes, With SLIDERBOX™ There's No Need To Remove Or Relocate Mounting Screws To Re-position The Box.

SLIDERBOX™ Installed with 1/2" Drywall

SLIDERBOX™ Adjusted for Ceramic Tile

SLIDERBOX™ Features

- Slots retain slider plate and guide it in a straight motion.
- Internal rails guide slider plate for smooth mounting adjustability in wall substrates from 1/2" to 1 3/8" thick.
- Square corner design allows easy wall cut-in (Old work applications).
- Molded spline device holes for quick device screw installation in wall boxes and machine tapped threads for ceiling fixture support in round ceiling boxes.
- Allied Moulded exclusive patented (U.S. Pat. #6365831 B1) molded in Speed Klamps™ in multi-gang and ceiling boxes.
- Molded of engineering grades of non-metallic thermoplastic.
- SB-2, SB-3 are  listed for 2HR fire resistive walls
- SB-1, SB-1H, SB-CB and SB-CBFR are  listed for 2HR fire resistive walls and ceilings.

- Slider plate holds screws in ready position to enable contractor to mount boxes faster.
- Patent pending design allows for adjustments in new or old work installations.

- Heavy-duty non-slip pad to ensure box and slider assembly solidly hold mounted position.
- Tested to hold 50 lbs. hung on box to simulate power cord pull-out strength.

- Fan support product has steel bracket and mounting bolts for secure paddle fan mounting.

- Multi-gang boxes consist of internal holding slots for LVP-2 low voltage partitions and dual voltage applications.

Slider plate in full forward position sets box for 1/2" drywall.

Slider plate retracted sets box in fully adjusted forward position for maximum wall substrate thickness of 1 3/8".

Installation Instructions:

1. Position slider plate forward so box will mount in its normal position for nominal drywall thickness.
2. Attach SLIDERBOX™ to wood stud by driving screws in tight.

3. Wires should be installed and drywall hung and trimmed according to building code.

4. SLIDERBOX™ will be mounted flush with drywall at this point.

Adjust Box for Additional Wall Substrate:

1. Once additional wall substrate is applied, the SLIDERBOX™ will need to be adjusted flush to the new surface.
2. Make sure there is clearance around the box prior to adjustment.
3. Loosen the two mounting screws until box moves freely in the slider mechanism and will slide forward.
4. Grab box interior or the installed wire and pull forward until top edge is flush with the new surface.

5. Re-tighten the slider plate mounting screws.
6. Install wire device and cover plate.
