EZ-Path® RETROFIT DEVICE | Installation Guide EZDR200 & EZDR400

The EZ-Path® Retrofit Device is designed to bring overfilled cable sleeve penetrations into code compliance. The device features a built-in fire and smoke sealing system that installs over the end of conduit sleeves and stubs restoring deficient fire and smoke seals without the need for additional firestopping products. See installation instructions below for more detail.

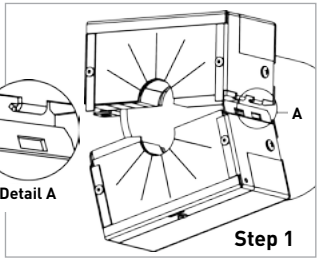

What is Included

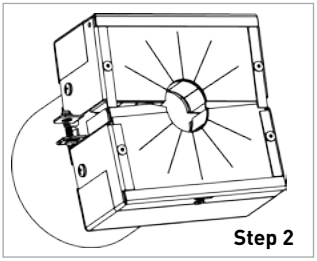

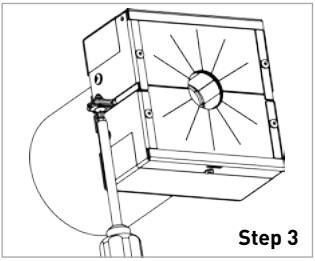

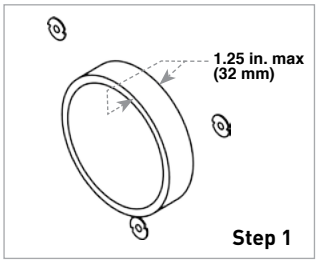

Sleeve Mounted Installation

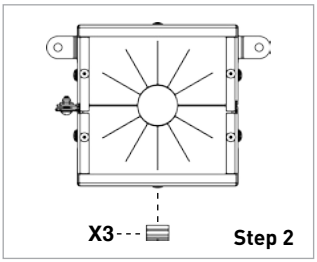

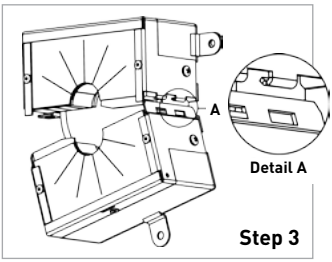

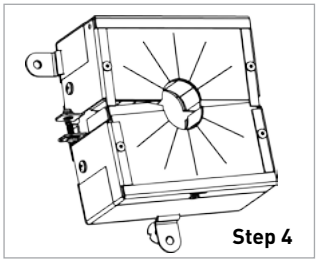

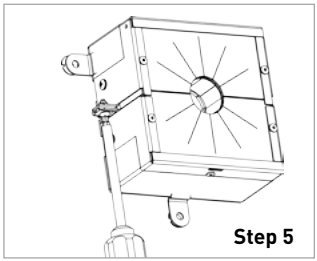

Wall Mounted Installation

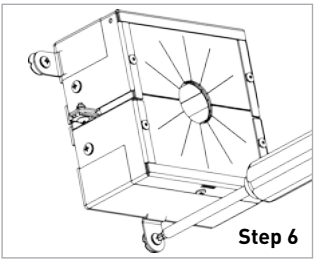

Note: Cables are deliberately not shown in any of the images to clarify device installation. However, a visual cable loading of 50 to 100% is required. For cable types and sizes, refer to applicable UL Certified Systems.

For fastener types, consult the latest UL® fire resistance directory for permissible types and sizes.
